Inflation Expectations:

Determinants and Consequences Conference

Becker-Friedman Institute, University of Chicago

October 2023

My Take

- ▶ Excellent paper!
- ▶ My recommendations:
 - ▶ More data work: what precisely do partisans say they disagree about?
 - ▶ Clarify what qualifies as “partisan reasoning”

Background

Expectations

Wlezien et al. (1997), Duch et al. (2000), Bartels (2002), Gerber and Huber (2010)

Background

Expectations

Wlezien et al. (1997), Duch et al. (2000), Bartels (2002), Gerber and Huber (2010)

Consumption Decisions

Gerber and Huber (2009), McGrath (2016), Mian et al. (2017), Gillitzer and Prasad (2018)

Background

Expectations

Wlezien et al. (1997), Duch et al. (2000), Bartels (2002), Gerber and Huber (2010)

Consumption Decisions

Gerber and Huber (2009), McGrath (2016), Mian et al. (2017), Gillitzer and Prasad (2018)

Broader Economic Decisionmaking

Kempf and Tsoutsoura (2021), Engleberg et al. (2022), Meeuwis et al. (2022), Cassidy and Vorsatz (2021)

Big Picture

Where should the partisanship literature go next?

Big Picture

Where should the partisanship literature go next?

1. Aggregate effects of partisanship

Big Picture

Where should the partisanship literature go next?

1. Aggregate effects of partisanship

Show that partisanship explains a substantial amount of dispersion in expectations overall.

Where should the partisanship literature go next?

1. Aggregate effects of partisanship

Show that partisanship explains a substantial amount of dispersion in expectations overall.

2. Origins of partisan beliefs

Text data where respondents self-report their reasoning.

3. Heterogeneity in responses to partisan shocks

Big Picture

Where should the partisanship literature go next?

1. Aggregate effects of partisanship

Show that partisanship explains a substantial amount of dispersion in expectations overall.

2. Origins of partisan beliefs

Text data where respondents self-report their reasoning.

3. Heterogeneity in responses to partisan shocks

Compare households expectations to that of professional forecasters

This Paper

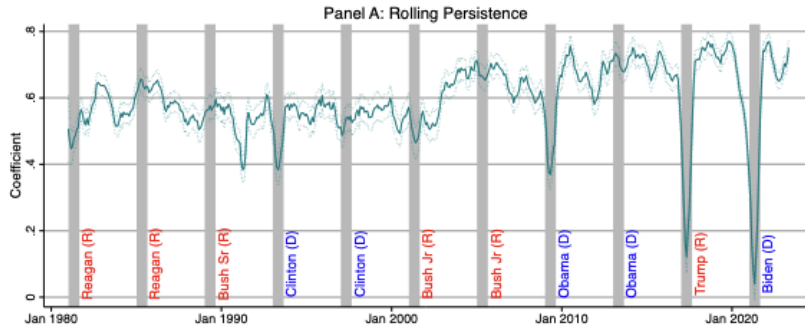

Use multiple correspondence analysis (MCA) to reduce the dimensionality of responses to the Michigan Survey of Consumers.

- ▶ Label the first principal component “sentiment”
- ▶ Show that sentiment is highly persistent, except when the White House changes hands by estimating the following regression:

$$f_{i,t} = \alpha_t + \beta_t f_{i,t-6m} + \epsilon_{i,t}$$

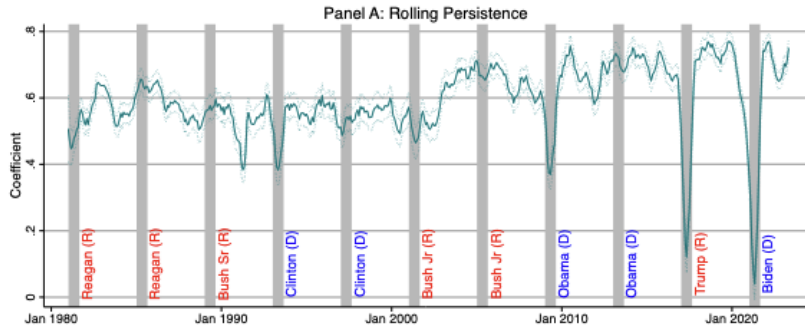

- ▶ Show that, across respondents, political affiliation explains a substantial amount of the variation in sentiment. The explanatory power has increased over time.

Evidence from Expectations

Key takeaways from this figure:

1. Stickiness

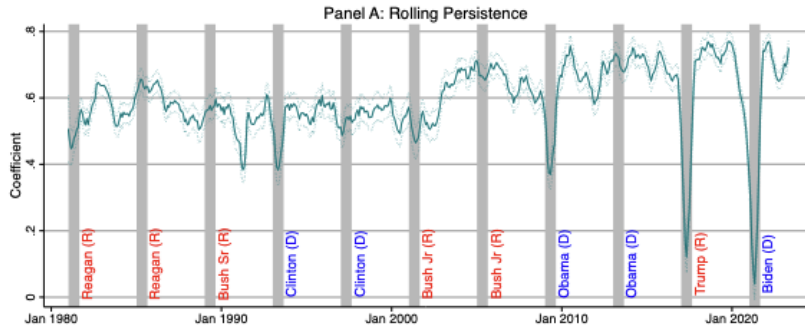

Evidence from Expectations

Key takeaways from this figure:

1. Stickiness
2. Reversals

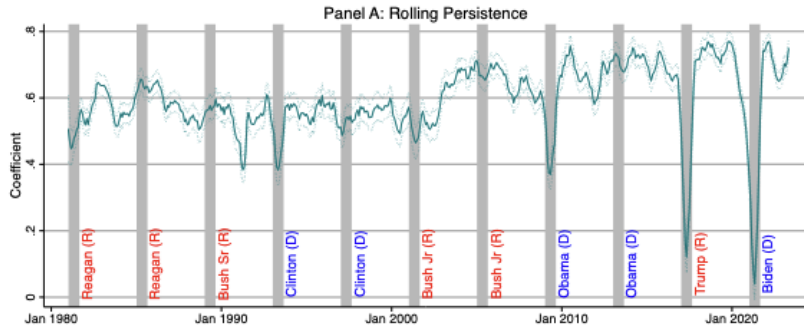

Evidence from Expectations

Key takeaways from this figure:

1. Stickiness
2. Reversals
3. Magnitude versus all other factors

Evidence from Expectations

Key takeaways from this figure:

1. Stickiness
2. Reversals
3. Magnitude versus all other factors
4. Importance of partisanship over a long time-horizon

Partisan Narratives

Big outstanding question: why do partisans disagree?

Partisan Narratives

Big outstanding question: why do partisans disagree?

Two credible hypotheses:

Partisan Narratives

Big outstanding question: why do partisans disagree?

Two credible hypotheses:

- ▶ Policy disagreement

Partisan Narratives

Big outstanding question: why do partisans disagree?

Two credible hypotheses:

- ▶ Policy disagreement
- ▶ In-group favoritism – rooting for the “home team”

Partisan Narratives

Big outstanding question: why do partisans disagree?

Two credible hypotheses:

- ▶ Policy disagreement
- ▶ In-group favoritism – rooting for the “home team”

Current findings:

Partisan Narratives

Big outstanding question: why do partisans disagree?

Two credible hypotheses:

- ▶ Policy disagreement
- ▶ In-group favoritism – rooting for the “home team”

Current findings:

- ▶ Frequency with which respondents cite government policy has increased

Partisan Narratives

Big outstanding question: why do partisans disagree?

Two credible hypotheses:

- ▶ Policy disagreement
- ▶ In-group favoritism – rooting for the “home team”

Current findings:

- ▶ Frequency with which respondents cite government policy has increased
- ▶ Code references to government policy as positive or negative

Partisan Narratives

Big outstanding question: why do partisans disagree?

Two credible hypotheses:

- ▶ Policy disagreement
- ▶ In-group favoritism – rooting for the “home team”

Current findings:

- ▶ Frequency with which respondents cite government policy has increased
- ▶ Code references to government policy as positive or negative
- ▶ Modest correlation between “partisan reasoning” and sentiment

$$\Delta f_{i,t} = \alpha_t + \beta_t \Delta g_{i,t} + \epsilon_{i,t}$$

Partisan Narratives – Comment # 1

Change in frequency of references to government policy is hard to interpret as partisan:

Partisan Narratives – Comment # 1

Change in frequency of references to government policy is hard to interpret as partisan:

- ▶ Partisans feel better about “their team” being in power, so they cite government policy and report higher sentiment.

Partisan Narratives – Comment # 1

Change in frequency of references to government policy is hard to interpret as partisan:

- ▶ Partisans feel better about “their team” being in power, so they cite government policy and report higher sentiment.
- ▶ Partisans approve of the government policy of “their team”, thus resulting in increased sentiment.

Partisan Narratives – Comment # 1

Change in frequency of references to government policy is hard to interpret as partisan:

- ▶ Partisans feel better about “their team” being in power, so they cite government policy and report higher sentiment.
- ▶ Partisans approve of the government policy of “their team”, thus resulting in increased sentiment.

An alternative exercise:

Partisan Narratives – Comment # 1

Change in frequency of references to government policy is hard to interpret as partisan:

- ▶ Partisans feel better about “their team” being in power, so they cite government policy and report higher sentiment.
- ▶ Partisans approve of the government policy of “their team”, thus resulting in increased sentiment.

An alternative exercise:

- ▶ What subject matter do partisans emphasize when they favorably or unfavorably mention government policy.

Partisan Narratives – Comment # 1

Change in frequency of references to government policy is hard to interpret as partisan:

- ▶ Partisans feel better about “their team” being in power, so they cite government policy and report higher sentiment.
- ▶ Partisans approve of the government policy of “their team”, thus resulting in increased sentiment.

An alternative exercise:

- ▶ What subject matter do partisans emphasize when they favorably or unfavorably mention government policy.
 - ▶ Are there sharp differences in topic? I.e. taxes versus health care.

Partisan Narratives – Comment # 1

Change in frequency of references to government policy is hard to interpret as partisan:

- ▶ Partisans feel better about “their team” being in power, so they cite government policy and report higher sentiment.
- ▶ Partisans approve of the government policy of “their team”, thus resulting in increased sentiment.

An alternative exercise:

- ▶ What subject matter do partisans emphasize when they favorably or unfavorably mention government policy.
 - ▶ Are there sharp differences in topic? I.e. taxes versus health care.
 - ▶ Are their responses consistent? Example: do Republican respondents favorably mention taxes after tax cuts under Democratic administrations.

Partisan Narratives – Comment # 2

- ▶ Label references to government policy as “partisan reasoning”

Partisan Narratives – Comment # 2

- ▶ Label references to government policy as “partisan reasoning”
- ▶ By themselves, referring to government policy are not clearly “partisan”
 - ▶ References do not necessarily indicate disagreement across party lines

Partisan Narratives – Comment # 2

- ▶ Label references to government policy as “partisan reasoning”
- ▶ By themselves, referring to government policy are not clearly “partisan”
 - ▶ References do not necessarily indicate disagreement across party lines
- ▶ Another test: do references to government policy increasingly use partisan language?

Partisan Narratives – Comment # 2

- ▶ Label references to government policy as “partisan reasoning”
- ▶ By themselves, referring to government policy are not clearly “partisan”
 - ▶ References do not necessarily indicate disagreement across party lines
- ▶ Another test: do references to government policy increasingly use partisan language?
- ▶ One option: use method of Gentzkow et al. (2019) to test whether the language used to reference government policy has become more partisan

Small Comments

1. Additional details about how MCA is estimated would be helpful, even if relegated to an appendix.
2. Additional details about how you code “favorable” versus “unfavorable” partisan responses.

Conclusion

- ▶ Excellent paper!
- ▶ My main suggestions:
 - ▶ Justification for “partisan” narratives.
 - ▶ Do more with the text data to disentangle “rooting for the home team” versus policy approval.

Thank You!
